SUMMARY

Python full stack developer with **4+ years of experience** designing scalable REST APIs, **AI-powered** applications, and high-performance backend systems. Proficient in **Python, FastAPI, Django, and Flask**, with hands-on expertise in **LLM** integration, **RAG** pipelines, prompt engineering, and document processing using Llama 2. Experienced in deploying applications on **AWS** with **Docker** and CI/CD pipelines. Skilled in building domain-specific AI solutions and optimizing **PostgreSQL** databases for production-grade telecom and AI applications.

TECHNICAL SKILLS

Programming Languages	Python, JavaScript
Backend	Django, Flask, Fast API, REST Framework, JWT Authentication
Frontend	React, HTML, CSS
Database	MySQL, PostgreSQL, SQLite, MongoDB
Tools	Git, Docker, Postman, swagger
Cloud & DevOps	AWS, Docker, CI/CD Pipelines, Jenkins, Kubernetes
AI/ML	Gen AI, LLMs, RAG, Embeddings, Prompt Engineering, NLP, Fine Tuning, Llama 2, Ollama, Document processing

EXPERIENCE

Product Specialist-Programmer Analyst Trainee | Blueberry Global, Chennai April 2022 – Present

Domain-Fine-Tuned Legal Summarizer (Internal)

- Built an AI-powered legal document summarization system using **Llama 2** (via Ollama)
- Developed backend APIs using **FastAPI** for document upload and processing
- Implemented text extraction (PDF/DOCX) and **chunking** for large document handling
- Designed **prompt**-based summarization to generate executive summaries, obligations, and risk insights
- Integrated **LLM** inference pipeline for real-time legal document analysis
- Improved processing efficiency by handling large inputs using chunk-based aggregation

Interoperable IoT Platform (Telecom)

- Architected **RESTful APIs** for device management, data ingestion, and protocol translation across multiple telecom standards
- Delivered **JWT**-based authentication and certificate management ensuring secure device communication across network protocols
- Designed a scalable **PostgreSQL** schema for persistent storage of device telemetry, events, and platform metadata with fast query response
- Built a **React** dashboard for real-time device status visualization, improving operational team response efficiency

Cross-Platform Application Framework (Telecom)

- Led development of a modular backend framework adopted across multiple internal projects, reducing new project setup time
- Built REST APIs using **Flask** and **Django** enabling seamless frontend-backend communication across mobile, desktop, and web platforms

- Reduced API response time through backend logic refactoring and targeted **PostgreSQL** query optimization

Universal Communication Gateway (Telecom)

- Owned end-to-end development of a UCG bridging multiple network generations (2G–5G) across vendor-specific implementations
- Engineered a **JSON**-based translation layer enabling reliable data format conversion between disparate telecom systems
- Standardized vendor interfaces enabling plug-and-play interoperability without custom code per integration
- Hardened platform security with **OpenSSL** encryption and **JWT** authentication to safeguard data integrity across production environments

EDUCATION

Master of Business Administration 85%
GRT Institute of Engineering and Technology, Tiruttani

Bachelor of Computer Science 82%
Arakkonam Jaya Arts & Science College, Arakkonam

Higher Secondary (12th Std) 72%
Dr. VGN Matric Hr. Sec. School, Tiruttani

Secondary School (10th Std) 81%
Dr. VGN Matric Hr. Sec. School, Tiruttani

LANGUAGES

English | Tamil | Telugu
